

Technology Needs Assessment

Developing a technology needs assessment requires information on the best way to look for scholarly information. This includes using scholarly and professional publications, for example, peer-audited diaries and medical journals.

Implementing telehealth [NURS FPX 6214 Assessment 1 Technology Needs Assessment](#) into Vila Hospital can improve patient outcomes and decrease medication errors in distant areas (Jin et al, 2020). Careful assessment of security requirements and stakeholder contemplations are important to guarantee effective implementation.

Assessing Community Health Care Needs

Community health assessment is the systematic analysis of information to perceive problems and requirements in a community. Corresponding to technology, it is the investigation of problems that healthcare systems have and what solutions can be provided by another technology. For [NURS FPX 6218 Assessment 2 Assessing Community Health Care Needs](#), Vila Hospital needs to assess the potential advantages and hindrances to integrating telehealth into its Electronic Health Record (EHR) system. This can help improve patient care conveyance and diminish medication errors. NURS-FPX-6214 Assessment 1: Technology Needs Assessment.

Creation of Policy or Procedure

Technology assessment is a significant tool for clinicians, payers, and policymakers. It can provide information to help pursue clinical choices, guide inclusion decisions, and set public health policy. To be best, in any case, it should be founded on a reasonable analytic framework that is specified before the review begins.

An example of a technology assessment is the use of telehealth technology at Locales hospital for diabetic patients to improve communication [NURS FPX 5005 Assessment 4 Analysis of Technology in Nursing Practice](#) nurses and patients. It is important to evaluate this new technology to perceive how it will be used and to distinguish any worries that might emerge (Vis et al., 2020).

Congress laid out OHTA to direct these assessments and to guarantee that their outcomes are transparent and impartial. The regulation likewise requested the Institute from Medicine to develop a process for setting priorities for these assessments. This would help OHTA in its expanded job, and it would likewise be good for other organizations that should determine how to apportion restricted assessment assets.
